

A **Beginners Guide** on getting tokens
by: Randy - co-founder - **Garden State Crypto**
<http://gardenstatecrypto.com>

First, one needs **Bitcoin-SV**.
This is needed to do any token trading
and is the native currency of TSWAP.IO

To exchange currency into BSV I recommend **Dove Wallet**
<https://dovewallet.com/>

There's also a coingeek article on more options:
<https://coingeek.com/how-to-buy-bsv/>

When trading other coins to BSV:
<https://otc.relayx.io/>
<https://changelly.com/>

Next you need a **software wallet / web extension** to interface with
Token Swap – <https://tswap.io/>

For **phone** and **desktop** there's: <https://volt.id>

For **Chrome browser** I suggest **Sensilet**, it's super easy:
<https://sensilet.com/>

<https://chrome.google.com/webstore/detail/sensilet/aadkcfdlmddiibdnhfbpbmfcaoknkm>

Finally **connect to TokenSwap** <http://tswap.io>
From there you may **purchase** tokens, **stake** and **yield farm**.

For newer, low cap unverified tokens you may click the token name and switch to "Unverified Zone"

Have fun!
