

NFT's can be free to make! Let us show you!

NFT the token, on the BSV Blockchain
Whitepaper v.1.1 by Randy / VIPNFT.ME
November 21, 2021

"The biggest barrier I have found in teaching people how to make NFT's is the funding of newb wallets." - Randy, founder

Obstacles and Solutions:

By using our **VIPNFT** gateway we intend to provide a **seamless** and most importantly **free experience** in **NFT** creation for the end user. How is this possible? Simple - The fees are so low on **BSV** that by using an ad based revenue model we can keep the service completely free and create profit.

How it Works for an Advertiser:

The **\$NFT Token (\$NFT)** is the defacto credit used by advertisers. **\$NFT** funds pay per click and pay per view. We chose to use tokens since **BSV** only has 8 decimals and with a token we can add an extra 8 decimals to get true micro and pico payments. We feel that if and when **BSV** price moons that the extra 8 decimals will really come in handy! Advertisers simply attach / bind their **NFT** advert with **\$NFT** tokens with the simple gateway we provide. Their ads stay on chain forever!

VIPNFT – The End User Experience with Full Web3 Integration:

The average first time **NFT** user, in my experience, has no knowledge of how cryptocurrency or keys work. Instead of trying to educate new users we feel using a browser based wallet similar / compatible to **Sensilet** or **Volt.id** the user may connect passwordlessly to our **NFT** Creation gateway. There they are to be presented with the option of viewing ads, filling out forms, solving puzzles to create an **NFT** for **FREE**. There is also an option to create an **NFT** with an ad attached or embedded in lieu of having to view ads. We intend to make this experience seamless as well as wallet integration automation. With the ad based model we believe the **\$NFT** platform will be extremely profitable and we should be able to provide all sorts of **free blockchain services**.

Conclusion – Why we are Unique:

Our service targets the masses who just cant seem to grasp crypto, the typical user who is completely fine with ad based services such as facebook and instagram, the ones who just want to make a greeting card like **NFT** that they may send their friends or possibly sell. This makes up > than 95% of the internet.
